

Web2Berry

Users Manual

Introduction

Web2Berry is an application that can be used by a Website Administrator, Website Owner, Face Book user, Orkut Scrapper, mySpacer, blogger, Article writer, a contributor or a spectator to the web to make people text chat to his/her blackberry mobile phone.

Web2Berry customers will receive a unique URL which can be posted anywhere on the web or in places such as email signatures and anyone can just click the link and start chatting to his blackberry instantly.

Installation

Installation of Web2Berry can be performed Over The Air (OTA) by navigating to www.vapssky.com/w2b.jad from your phone's web browser. Web2Berry installation package is provided in Blackberry standard JAD/COD format.

Once you click on the download URL of Web2Berry from vapssky.com, you will be prompted to download Web2Berry and to configure permissions. Web2Berry requires permission to use network for its proper functionality and you must set the permissions for the same. On most phones, this permission will be granted automatically or will be prompted at the first use of the feature. Once the installation is completed, you can run the application from the phone's main menu.

Permission Settings

Since Roblock uses several features of the device that requires security permission, we recommend setting all the setting to 'Allow' for best results. Permission settings can be made from Options > Advanced > Applications > Web2Berry > Permissions

Login Information

Web2Berry asks for your username and password each time the application is launched. You can create a username and password by visiting <http://www.vapssky.com/web2berry> and selecting the New User icon. You will be prompted to provide the Product Key that you received in the purchase email you received from us. Once your Product Key is verified, you are allowed to create a username and password. This username will become part of your chat domain as <http://username.web2berry.com> . If you forgot your password, you can recover it by visiting <http://www.vapssky.com/web2berry> and selecting the 'Forgot password' link.

Domains

Once you are successfully logged on to the server, you are taken to the domains list. This displays the list of the ongoing chats categorized by the incoming domain. This makes it easy for you to identify the website from which the user is chatting to you. You can also go offline on one particular domain by selecting the options menu > offline.

Chat Window

You can navigate to the chat window by selecting any of the entries in the domains list with at least one ongoing chat session denoted by the numerical value right to the domain name. The chat window displays the currently ongoing chat sessions for the selected domain in multiple tabs. You can move the trackball horizontally to select a chat session and press the trackball to display the selected chat session. You can type your responses in the text field towards the bottom of the window and press the 'Enter' key to send the message.

Predefined Messages

You can save your frequently used messages under settings > predefined messages. The text field towards the bottom of the settings window can be used to type your predefined messages and press enter to add the same to the list of predefined messages displayed above it. While chatting, you can double tap the space key to cycle through the predefined messages.

Uninstalling Web2Berry

If you want to remove or reinstall the Web2Berry application from your phone, navigate to **Options>Advanced>Applications>Web2Berry** Menu and select the delete option. Uninstalling the application does not remove the URLs that you have posted on the web, which you will have to manually remove.
